Notice for change of Panic button

VT-Panic-LED

We have made a product change to our VT-Panic button, this has now been replaced with the VT-Panic-LED. We have a new wiring diagram and installation guide for this which is now available on our site.

The main changes are listed below:

- This has activation LED's to show Panic has been activated.

- Green is normal working state, Red shows activation.

- The Button should be left in a Green state.

- 3 cables for connection

- Works off a voltage on connection, the previous used to work on NO/NC.

- Slightly bigger in size, see below.
